### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

1. The application has been amended as follows:

In the Abstract:

On Page 14, in line 2, delete "device in mounted" and insert --device is mounted--

In the specification:

On Page 1, in line 12, delete "opposite respective" and insert --opposite ends respectively--

On Page 1, in line 22, delete "trains." and insert --trained.--

On Page 6, in line 11, delete "hole" and insert --hold--

### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance:

The claims as presented avoid the prior art of record. The prior art does not disclose an exerciser with a frictional damping device that adjustably compresses a plurality of dampening components against a main frame and a pair of swing arms that are stepped upon by a user for exercise. In particular, the damping components comprise a post horizontally attached to the frame such that the frame divides the post equally into first and second sections, first and second stoppers respectively sleeved onto the first and second sections of the post to abut against the frame, then first and

second friction washers respectively sleeved onto the sections of the post, then first and second sleeves pivotally sleeved onto the sections of the post such that each friction washer is sandwiched between its respective stopper and sleeve, a first swing arm securely connected to the first sleeve, a second swing arm securely connected to the second sleeve, a shaft extended through the first and second sleeves and the post, a locking mechanism mounted to a first end of the shaft to prevent the shaft from rotating relative to the post and an adjusting set mounted to a second end of the shaft for reducing the distance between the first and second sleeves to increase the friction force between the first stopper, friction washer and sleeve and the second stopper, friction washer and sleeve such that rotation of the adjusting set may increase or decrease the effort required by a user to move the swing arms during exercise.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Holstag '575, Brigliadoro '107, Dalebout et al. '126, 776, Piller '522 and Gvoich '027 each disclose an exercise device having pedals or swing arms and a frictional resistance means that includes frictional discs or washers.
